The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1- 22 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent #6316996 to Puotiniemi.

Applicant's claims read upon a mixer or, alternatively, a modulator where an input signal is modulated by a local oscillator. Note the claim language in claim 1, "converting the signal inputs into modulated output current signals. The signal inputs (IN+, IN-) does not have information associated with the inputs such as data indicating modulation in the technical sense.

U.S. Patent #6768391 to Dent et al specifically discloses in col.1, line(s) 6, 13-20, "modulator or mixer circuits"; "Modulators are referred to as 'mixers' or 'multipliers'. For example, in a mobile terminal, a modulator may be used in the transmitter thereof to modulate an input signal (voice and/or data) for wireless transmission. A particular type of modulator which is widely used is the 'Gilbert Multiplier Cell' also referred to as the 'Gilbert modulator, the 'Gilbert cell', or the 'Gilbert mixer'." So, the Gilbert cell is alternatively called a mixer and a modulator.

The '996 patent discloses in Fig. 4 a circuit arrangement that combines a Gilbert cell mixer, or modulator, having input signal terminals 1 & 2. The mixer then converts the

input signals from terminals 1 & 2 into modulated output signals, based upon the local oscillation input signal 1. An AGC amp is combined with the mixer/modulator and receives the output signals from transistors 46 & 49. The AGC amp is also connected to a supply voltage Vcc-69. AGC amplifies the mixer's output signals before delivering the amplified signal to resistors, the balanced loads, 64, 67.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dent et al, Chominski, and Gonya, Sr..

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
